NEUROPTICS[®]

NPi®-300 Pupillometer System

The Next Generation in Automated Pupillometry

Manual Pupil Assessment Can Be Highly Subjective and Inaccurate

- Often, pupillary changes are often considered early indicators of neurological change and yet can be **undetectable using traditional manual assessment methods**.*
- Manual pupillary assessment is subject to compounded sources of inaccuracies and inconsistencies and can result in as much as **39% inter-examiner variability and error**.*

Automated Pupillometry Using the NPi-300

- The NeuroOptics NPi-300 Pupillometer is a handheld automated device that provides an **accurate, reliable, and objective measurement of pupil size and reactivity**.
- Adoption of automated pupillometry is accelerating as the method for pupillary assessments in patient care in **any area of the hospital where a neurological exam is performed**, including every ICU, the Emergency Department, Progressive Care Units, and more.

NPi = Reactivity

- **The NPi® Pupil Reactivity Assessment Scale quantifies pupil reactivity** on a numeric scale from 0-4.9 (see *NPi Pupil Reactivity Assessment Scale*), enabling reactivity to be **trended over time just like other vital signs**.
- **NPi is an accurate and objective measurement of pupil reactivity** in many common critical care scenarios, including in the presence of common medications such as opioids, neuromuscular blocking agents (NMBA's), and sedatives.*

An Abundance of Science

- There are now **over 140 peer-reviewed research articles and scientific abstracts** supporting the value of pupillometry and NPi in improving the quality of the neurological exam and enhancing clinical decision making and patient care.*
- Pupillometry and NPi are included in several **clinical reference texts and national guidelines**.*

Measure Pupils

- Establish the earliest possible baseline pupil measurement when the patient is admitted to the Emergency Department or ICU.
- Upgraded NPi-300 User Interface and Keypad makes successfully targeting the pupil and taking a measurement easier than ever before.

Trend for Changes

| | | |
|---------------------------------------|----------|------|
| ID: 123456789 | (37/168) | |
| Summary | RIGHT | LEFT |
| NPi ≥ 3 | 27 | 32 |
| NPi < 3 | 5 | 3 |
| NPi = 0 | 5 | 2 |
| Δ NPi ≥ 0.7 | 0 | 5 |
| (touch the screen to toggle to graph) | | |

- Trend for changes in NPi and Size over time via your standard pupil assessment protocol.
- New NPi-300 NPi Summary Table quantitatively summarizes number of NPi measurements in normal and abnormal thresholds across patient's entire stay.

The NPi® Pupil Reactivity Assessment Scale

| Measured Value* | Assessment |
|-----------------|--|
| 3.0 – 4.9 | Normal |
| < 3.0 | Abnormal |
| 0 | Non-Reactive, Immeasurable, or Atypical Response |

*A difference in NPi between Right and Left pupils of ≥ 0.7 may also be considered an abnormal pupil reading

*Per the NPi algorithm

NPi[®]-300 Pupillometer

- Infrared camera, high-precision optics, processor and LED light source

Incorporated Barcode Scanner (Fig. 1)

- Instantaneous scanning of 1D or 2D patient barcodes

Modern User Interface

- Simple icon-based navigation
- Simplified trending screen displaying NPi and Size trends over 12-hour time windows

Texturized Plastic Handle

- Ergonomic grips for easy handling

NPi-300 Wireless Charging Station (Fig. 2)

- Completely enclosed wireless charging system
- Durably withstands cleaning with hospital cleaning agents

SmartGuard[®]

- Single patient-use device with RFID memory chip
- Stores 168 bilateral pupil measurements for duration of patient admission
- Patient data can be disabled in compliance with HIPAA guidelines and facility policies
- Facilitates patient data upload into EMR system

An accurate, reliable and objective system that enhances pupillary assessment
